

THE CEMATRIX™ ADVANTAGE

City of Yellowknife

November 30, 2009

RE: Endorsement CEMATRIX Cellular Concrete Products

The City of Yellowknife has used CEMATRIX cellular products in the past and intends on using similar CEMATRIX products in the future to deal with problematic roads.

Franklin Avenue, was experiencing major differential settlement due to thawing of frozen ground.

In 2004 the City retained CEMATRIX (Canada) Inc. to install a cellular concrete product solution that would address the issue of settlement as well as arrest the deterioration of the frozen ground present underneath the road in question.

To date the road has held up extremely well and the City considers the project and solution a complete success. The City of Yellowknife has also identified several other roads experiencing similar problems where CEMATRIX products will be used as a component of the road reconstruction.

Yours truly,

D.K., P.Eng.
City of Yellowknife
